

Devops Engineer (m/f)

You can get a lot of money back with tax declarations, but it's complicated, time-consuming and no one really understands them. We are on a mission to change that: With specialized tax tools and modern UX, we are currently reinventing the whole tax industry. We are in the process of disassembling our Rails based monolithic app, turning it into fine grained microservices and moving them into a container based application layer, and looking for a Devops Engineer to start immediately in our cosy loft in the center of Kreuzberg, Berlin

What is expected from you

- Work side by side with the best engineers in a continuous deployment workflow
- Automate scaling, maintenance and configuration of a cloud infrastructure running on AWS.
- Evaluate technology decisions and implementation strategies
- Troubleshooting and disaster recovery
- Build automated tests to make sure all components work properly.
- Contribute to open source projects (e.g. Kubernetes, Openresty and many more)

What is required

- +3 years of experience
- English (work proficiency)
- College Degree in Computer Science or related areas (for the work visa process)
- Availability to move to Berlin

What do we offer

- We work together as a team: knowledge & experience is shared all the time
- We believe that a diverse team will create a better product
- We improve our code quality day by day
- We base our decisions on quantitative and qualitative data
- We believe in a healthy work-life balance

Sounds good? Send us an email with your CV/LinkedIn and Skype/Hangout account and your availability for a video conference (Berlin time). We reply fast. Please send your mail to jobs@wundertax.de. We especially encourage people from underrepresented groups to join us
